Work Experience _

 Google Brain
 Mountain View, California

 Senior Research Engineer
 2020-Present

Deep Learning research with a focus on Natural Language Processing, large pre-trained models, and zero-shot transfer.

- Prompt Tuning: an efficient method of controlling large frozen pre-trained language models based on T5. Matches performance of full fine-tuning using only 0.003% of the parameters. Open-sourced of our codebase and it has enabled 3 published papers, 1 product launch, and at least 5 in-flight papers.
- Flan: Multitask training for a 137 billion parameter transformer-based decoder-only language model to create a model that is more effective at zero-shot prompting and performs better using Prompt Tuning.
- SPoT: Using multitask prompts as strong initialization for Prompt Tuning resulting in increased performance. Also used prompt similarity to estimate task similarity and to predict transferability.
- Added partial network training, lazy loading, and pre-filling of the auto-regressive cache to t5x, the open-source reimplementation of T5 in Jax. This final change reduced inference latency from 30 seconds to 2.4.

Interactions Ann Arbor, Michigan 2018-2020

MACHINE LEARNING ENGINEER

Built production grade deep learning solutions and lead research efforts to push the boundaries of performance.

- Designed novel neural network architectures for calibrated intent detection, slot filling, and named entity linking using ConvNets, bLSTM-CRFs, ranking models, and transformer-based seq2seq models.
- Designed label space, annotation guidelines, and data collection method for NLU component of dialogue systems.
- Created a cloud-native model training platform based on declarative pipelines and kubernetes. Built a deployment platform that powers NLU for multiple production dialogue systems.
- Built efficient, batched implementations of complex neural network architectures such as Beam Search. My CRF implementation reduced training time by a factor of 10.

Trove

LEAD MACHINE LEARNING RESEARCH ENGINEER

2017-2018

Created a model training and serving platform that processed 200 million emails per day. Provided technical leadership to the ML team.

- Designed ConvNets for text classification to find sentences that contain questions. This powered a user-facing feature and was used to featurize the social graph created from email.
- Created neural ranking model was used to find coreferent mentions in the text and provide context to users.
- Used lexical features, as well as connectivity information in the email social graph, to identified bot accounts.

Visteon Corporation Van Buren, Michigan

SOFTWARE ENGINEERING INTERN

2015

Designed an adaptive system to minimize voice recognition errors based on ASR confidence scores. We patented this system and it is used in Mazda Cars.

Presentations

University of Michigan **Prompt Tuning** University of North Carolina

DEEP LEARNING 2021-2022

An overview of my work on Prompt Tuning, as well as our work—Flan and SPoT—directly built on Prompt Tuning. The talk includes a collection of insights about the behavior of soft prompts aggregated from others' followup work.

NeurIPS Spotlight Talk on Mead-Baseline

NeurIPS OSS Workshop

DEEP LEARNING December 2018

A spotlight talk, at the Open Source Software workshop at NeurIPS 2018, about our open-source toolkit, Mead-Baseline. **Confidence and Calibration of Neural Network Models**

EMU ML Conference

March 2020 ¹

An overview of techniques used to adjust model calibration, evaluation of models that have the ability to "reject" decision with low confidence, and their uses in the NLU unit of a production dialogue system.

Padding in Neural Networks for Natural Language Processing

A2D-NLP

NATURAL LANGUAGE PROCESSING

February 2020 A survey of NLP building blocks with a focus on correctness and the need for padding in complex situations as well as places it is

unexpected, like max-pooling following a 1D convolution.

Optimization via NumPy and Cython

Michigan Python Meetup

NUMERICAL COMPUTATION

January 2020

I use a series of optimizations for computing pairwise Manhattan distance to introduce core NumPy concepts and Cython to reduce the runtime from multiple hours to just seconds.

Input Representations of Deep Neural Networks

PyData Ann Arbor

DEEP LEARNING

October 2017

Using learned character-compositional input representations to create Deep Neural Networks with an open vocbaulary.

Skills

Extensive experience building novel Neural Network architectures, generally for NLP. High-performance training with **Deep Learning** Data and Model Parallelism, including multihost distributed training on TPU.

Infrastructure

Build and deploy with Kubernetes, Docker, Flux, MongoDB, Apache Nifi, Github Actions, and GitLab CI/CD. Experience training large neural networks on Google Cloud (GCP)

Jax, Flax, PyTorch, Tensorflow, NumPy, Pandas, Faiss, SpaCy, NLTK, Tensorflow-Datasets, Seaborn, and Matplotlib.

Languages Python, Cython, Java, C, Javascript, C++, Elisp, and LTEX.
